UNIVERSITY DATA SOURCES

Leverage the data that is out there

University Data Sources

While you research, make sure you know what is available to you. Some data sources are made publicly available at no cost, while other sources provide valuable information at affordable rates.

Integrated Postsecondary Education Data System (IPEDS)

This system that collects information from every college, university, and technical or vocational institution in United States. IPEDS examines movements in postsecondary education in the United States regarding the number of students enrolled, financial aid used, staff employed, dollar expenditures, and degrees and certificates that are earned.

U.S. Bureau of Labor Statistics

The federal agency that is responsible for evaluation of labor market activity, working conditions, and price changes in the economy with the goal to provide information to support public and private decision making. Data provided from this agency is factual, transparent, confidential, accurate, objective, and relevant.

Emsi

Emsi provides data that is collected from a large pool of various government sources, job postings, online profiles, and resumes. Emsi is mostly used by clients to help students develop a career vision, help employers understand workforce activity, and help recruiters hire the right talent. Emsi prepares data and analytics that help colleges and universities to create better strategies and make better decisions.

Burning Glass Technologies

Burning Glass provides employers, workers, and educators with the resources needed to make data-driven decisions by providing market analytics. Educational institutions can engage students with a meaningful curriculum, increase student completion, achieve a higher placement rate, and assist students in mastering key skills needed to enter the job market.

Indeed

Indeed.com prioritizes job seekers by providing them with free access to post resumes, research companies, and search for jobs. Indeed.com also assists companies in finding and hiring the quality talent.

Keyword Tool

Keyword Tool is an online keyword research engine that generates hundreds of relevant long keywords for any topic. Keyword tool helps you obtain valuable keyword suggestions that can help you increase the traffic to your website.

USA.gov

The U.S. Data and Statistics website provides an opportunity to find data about U.S. maps, populations, demographics, and economic data. Statistical information on a variety of topics is also provided here by several government agencies.

Data.gov

Data.gov is a robust resource created by the U.S. government to enhance public access to high value datasets. As of June 2017, Data.gov represented 200,000 datasets containing about 10 million data resources. While most datasets are provided by federal agencies, Data.gov also includes datasets from state, county, and city data catalogs.

O*NET

O*NET can be used by educators, job seekers, business and others to assist in meeting the talent need of the competitive economy. The data that is provided by O*NET has been proven to be vital in helping people find the necessary training and jobs, and employers to find adequate candidates.

Ready to get started?

Klein Consulting, LLC works to understand your organization's unique needs and challenges. From start to finish, your organization and Klein Consulting will be partners in:

- Finding inefficiencies
- Suggesting improvements
- Implementing custom solutions
- Automation of day-to-day operations
- Supporting your data-driven decision-making

By partnering with you in this journey, we're able to provide the best solutions to solve the problems you are facing.
